

Laser Design Cutting & Engraving

WE offer laser design, aimed at cutting and etching of a wide range of materials used in the corporate gifts market. We are able to laser engrave:

- * Plastic
- * Wood
- * Leather
- * Brass
- * Coated Metal
- * Stainless Steel
- * Ceramic Tiles

Laser engraving offers intricate and fine detail - Ideal for placing your unique text or logo onto the material of choice. Laser engraving (etching) offers a permanent record of your corporate statement, will not fade or rub off, and can be created with incredible detail that cannot be matched with other technologies.

In addition we offer personalized cutouts in leather, Perspex and a range of plastics, as well as wood. This allows us to create perfect fitting components, such as puzzles and 3D shapes, suited to your specific needs. Whether you require one item, or large volumes, we can satisfy all your laser etching corporate gift requirements..

Stainless steel engraving (uses laser paste)

R 6.50 Per minute

Normal engraving

R 5.00 Per minute

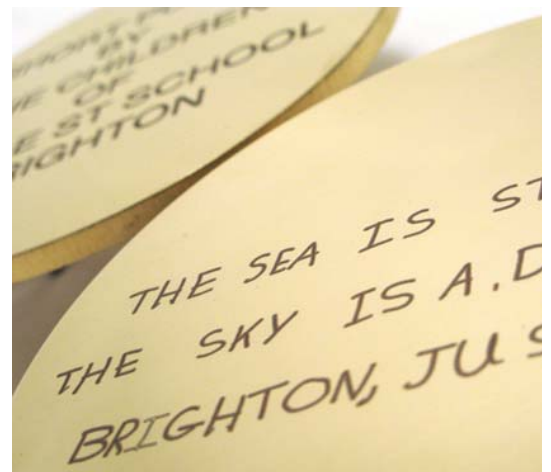

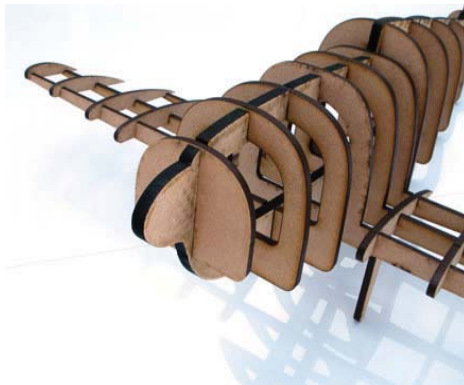

Must get artwork in vector format before we can give a quote.

We engrave direct from Corel Draw / Illustrator.

Gray scale pictures can also be engraved.

Setup per artwork for engraving

R 250.00 Once off

Raised, 3D & Laser Cut Signage

Raised, 3D & Laser Cut Signage

When a client is seeking a sign that is extruded from a surface or that needs to have depth to it we can tailor make a solution for them. This includes applications such as laser cut letters that are raised a distance from a surface to give a 3-Dimensional look, and PVC lettering which is constructed to have a specified depth.

Built up 3-dimensional lettering is a great way to add impact and distinctiveness to your commercial sign.

Nothing leaves a greater impression on your customers and employees as a custom made 3-D sign of your corporate logo proudly displayed in your reception area, or outside near your entrance.

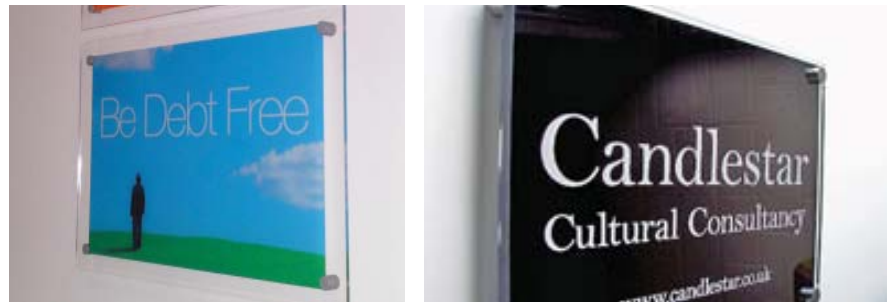

“What do you mean by 3D?” we’re often asked. People confuse the term with computer animated or virtual reality 3D. That type of 3D looks dimensional on a computer screen, but in reality is a flat image. Our work is “touch and feel 3D”, you can feel the textures.

Any numbering, lettering or logo can be precision cut out of aluminium or Perspex and then mounted onto a surface - Either directly or raised on pins to create a shadow effect. This kind of signage is used at town-house complex entrances, company entrances and reception areas, providing the perfect upmarket solution.

Lettering can be manufactured with or without returned edges and colors can be matched to your own requirements. 3-dimensional letters are available in a wide variety of sizes and colors.

These can be made from:

- * Formed plastic
- * Cut out aluminium or plastic
- * 3D all aluminium lettering
- * 3D lettering with illuminated faces
- * 3D Perspex lettering
- * Flat Perspex (acrylic) letters
- * Aluminium composite letters
- * Aluminium letters
- * Vinyl letters

Compared to conventional flush mounted vinyl lettering, built ups and flat cut Perspex letters, 3D Dimensional lettering adds perceived extra quality to any sign.

Laser cutting of letters, logos and shapes

Laser-cut lettering and logos are the most stylish form of signage, particularly popular for indoors in reception areas & outdoors in up-market areas.

This signage can be manufactured in Perspex and a variety of metals including aluminium with a brushed finish, stainless steel with a chrome finish and mild steel with a high gloss painted or sealed rust finish.

It can be pin-mounted onto most walls either flush or spaced away. It can be enhanced by mounting neon lighting behind to provide a halo effect any colour.
